

The Faraday Awards was made with the idea to put our money where our mouth is and support open-source tools with some financial benefits for the excellent work they do.

We think this kind of support will help with the continuity of great open source-security projects. With the purchase of every Faraday license, one of the tools below will receive a small payment to help with their future success.

At the moment these are the projects who already have agreed to be part of the awards:

- Amap - <https://www.thc.org/thc-amap/>
- Arachni - <http://www.arachni-scanner.com/>
- dnsenum - <https://code.google.com/p/dnsenum/>
- Hydra - <https://www.thc.org/thc-hydra/>
- Medusa - <http://foofus.net/goons/jmk/medusa/medusa.html>
- Nikto - <http://www.cirt.net/nikto2>
- w3af - <http://w3af.org/>
- Zap - [https://www.owasp.org/index.php/OWASP\\_Zed\\_Attack\\_Proxy\\_Project](https://www.owasp.org/index.php/OWASP_Zed_Attack_Proxy_Project)
